Do you like mathematics?
Let us show you what your future could hold!

Mathematics reveals hidden patterns that help us understand the world around us. It’s a dynamic area of research that can be applied to many fields such as biomedicine, game theory, climate change and financial markets.

Maths can be about data, measurements and observations from science, or it can involve deduction and proofs that stand true outside of physical science. It can be used to build models of natural phenomena, human behaviour and social systems.

What’s more, the muscles required for mathematics are of the intellectual kind!

Want to know more?

UNSW is holding this workshop to highlight some of the unique career and study opportunities mathematics can offer. So come along and discover your future in maths!

Applications close Tuesday 6 May 2014.
